

MSP Program

The McCrometer Service Plus Program offers a comprehensive, full service factory repair with a new one year warranty. This flat rate service fee takes the guesswork out of the cost of repair and calibration services.

Your meter will leave our facility looking and working like new, all backed by a one year warranty.

Meters serviced by McCrometer are calibrated in our NIST traceable flow facility that features a robust Calibration Test Lab which enables production and testing of the most accurate and precise flow instrumentation.

To ensure your meter is serviced with original manufacturer parts, we encourage you to use our Service Plus program.

To take advantage of the McCrometer Service Plus program, simply contact the factory at: 800-220-2279 for a return authorization number. Please be sure to have your flow meter serial number(s) that need service available.
